

BOX IT

FIELD ACTIVITY 03

due 05 feb 2018

*Have no fear of perfection, you'll never reach it
– Salvador Dali*

Using the box making tool presented in class, produce a personal utility box made from wood for your class materials. The size is open to your own interpretation but it must have:

- a functioning lid
- internal dividers
- personal graphics

Again, the size is up to you, but it must be capable of having a utility for Critical Making. It could be large and store your electronics for class, tiny for your Tylenol to make it through class, or something in between.

You must document your box using images. You should include images of your box, alone, in the context of usage, and if necessary with callouts. Upload the images of your design within a single PDF in bCourses.
